

SafetyNet Observation WELL Sheet

Observation Task
Observation Detail for Not Met (document in SafetyNet “Comments” section) 1) Intentionality: Indicate whether the observation was an intentional or a convenience observation 2) Gap: “What” behavior or standard was “Met” or “Not Met?” Include what activity was being observed. 3) Consequence: Document the “Consequence” and discuss with the individuals 4) Why: Ask “Why” the behavior or standard was “Met” or “Not Met.” a. You must know the “Why” to be able to fully address the gap b. Document the “Why” for standards/behaviors 5) Impactful Action: “How” was the “Met” or “Not Met” condition addressed? Provide feedback to reinforce good performance or correct performance gaps. Reference <i>Impactful Intervention Tool Kit</i> (located on Farley Homepage) for action taken in response to positives or deltas in CORE 4, Industrial Safety/PPE, PU&A, or Peer-to-Peer Coaching. 6) Peer to Peer: <i>If possible</i>, did the workers either 1) demonstrate peer coaching or 2) did the observer intervene to discuss a missed opportunity for peer coaching?

Observation Example

Intentionality: Yes- Intentionally observed PU&A regarding NMP-MA-019, “Bolting and Torque Guidelines”

Gap: During torquing activity related to pump reassembly, I observed that the correct torque value per procedure NMP-MA-019, “Bolting and Torque Guidelines” was not being used.

Consequence: Using the wrong torque on bolts could cause the bolt to deform or be unable to provide as much clamping force as needed resulting in poor equipment performance, including leaks.

Why: When asked why the bolts were being torqued to a different torque value than specified in the procedure, the individual responded that the torque value was the same used on the other same size bolts on this job. Further discussion revealed that the bolts were the same size but not the same grade, which requires a different torque value. The individual had not identified the difference and thought that all the bolts were the same grade.

Impactful Action: The individual reviewed the torquing procedure NMP-MA-019 requirements and differences for grades and materials of bolts and discussed with supervisor. Coaching provided on lack of attention to detail, need to review the materials and bolting requirements during Task Preview and to use a peer check on verifying the proper torque value. CR (Condition Report) written for MNT procedure revision to show difference in bolting material.

Peer to Peer: Peer did not provide Peer to Peer coaching or adequate peer check during activity per NMP-GM-005-002. Peer was coached to the standards.

SafetyNet Observation WELL Sheet

Importance of the “Why”

Without asking the WHY we cannot get the right action to address the gap in standards and behaviors. For example, the WHY basically falls into one of three areas:

1. Lack of Knowledge – Did not know the standard
 - a. Teach and seek to fill this knowledge gap. Consider is this a broader knowledge gap and look for opportunity to utilize training
2. Knows the Standard but just forgot – Recognizes the gap immediately when asked
 - a. People do get distracted, and people do forget – provide coaching and seek to understand and eliminate the distractions
3. Knows the Standard but did not follow it – Justifying the deviation
 - a. Coach to the right standard and take appropriate actions to address the gap in performance space. Document in connected conversations.

We also need to ask the WHY to be able to reinforce and recognize good behaviors for “Met” conditions.

Importance of Feedback Delivery “How”

Always consider the audience/individual when delivering a message. While the objective is to make the feedback “Impactful,” it is incredibly important to use the session to build trust within your team. Your goal as a leader is to have consistent interactions that reinforce the highest standards while demonstrating authentic care for your individuals’ and teams’ performance.

Do’s

- 1.) Consider the following when delivering feedback:
 - a. How can I simplify or clarify the message?
 - b. Can I directly tie this to a standard, site goal, or excellence plan item?
 - c. Can I use a story to personalize the message or help emphasize the learnings?
 - d. Does your body language or presence suggest that you are there as part of the team?
- 2.) Consider if the behavior is solely limited to the individual. Does the greater team have opportunities to grow from this learning?

Don’ts

- 1.) Do not have the mentality of “I need a delta. I need to catch the team doing something wrong.” Instead, be there to support the team by ensuring the standards are met.
- 2.) Do not count observations as beans. Instead, consider every observation as an opportunity to positively influence behavior. Praising good behaviors has just as much influence on the long-term success of the team as correcting bad behaviors.
